Fractal Functions, Fractal Surfaces, and Wavelets - 2nd ... Fractal Functions, Fractal Surfaces, and Wavelets, Second Edition, is the first systematic exposition of the theory of local iterated function systems, local fractal functions and fractal surfaces, and their connections to wavelets and wavelet sets. The book is based on Massopust's work on and contributions to the theory of fractal. Fractal - Wikipedia As mathematical equations, fractals are usually nowhere differentiable. An infinite fractal curve can be conceived of as winding through space differently from an ordinary line - although it is still 1-dimensional its fractal dimension indicates that it also resembles a surface. Fractal Functions, Fractal Surfaces, and Wavelets ... In this chapter fractal functions are considered (ie, functions whose graphs are fractal sets and which are generated by certain classes of iterated function systems). The term fractal refers to the fact that the graph of such a function has, in general, a nonintegral dimension.

Fractal Functions, Fractal Surfaces, and Wavelets: Peter R ... Fractal Functions, Fractal Surfaces, and Wavelets is the first systematic exposition of the theory of fractal surfaces, a natural outgrowth of fractal sets and fractal functions. It is also the first treatment to bring these general considerations to bear on the burgeoning field of wavelets. An Introduction to Fractals - Paul Bourke The Mandelbrot set is created by a general technique where a function of the form $z_{n+1} = f(z_n)$ is used to create a series of a complex variable. In the case of the Mandelbrot the function is $f(z_n) = z_n^2 + z_0$.

Iterated function system - Wikipedia The fractal is made up of the union of several copies of itself, each copy being transformed by a function (hence "function system"). The canonical example is the Sierpinski triangle. The functions are normally contractive, which means they bring points closer together and make shapes smaller. Sierpinski Triangle - Fractal Formulas The Sierpinski triangle, also called the Sierpinski gasket or Sierpinski sieve, is a fractal that appears frequently since there are many ways to generate it. It is named for Polish mathematician Wacław Franciszek Sierpinski who studied its mathematical properties, but has been used as a decorative pattern for centuries. Fractal Geometry - Yale University Introduction to Fractals and IFS is an introduction to some basic geometry of fractal sets, with emphasis on the Iterated Function System (IFS) formalism for generating fractals. In addition, we explore the application of IFS to detect patterns, and also several examples of architectural fractals.

Fractal Science Kit - Mandelbrot Fractal Overview Mandelbrot Fractals. Mandelbrot fractals are the result of iterating a fractal formula. A fractal formula is a statement like: $z = z^2 + c$. This statement takes 2 complex values found in the variables z and c , and combines them based on the expression to the right of the equal sign; in this case, by squaring z and adding c to the result. The resulting complex value is assigned to the variable.
